

Towards Unity

Emergic Approach: Philosophy Applied to Cognition

Agenda

I hope they don't
ask difficult
questions.

Time (pm)	Slides	Item
1:00	3-14	<u>Prologue</u>
	16-17	<u>Research Problems</u>
	18	<u>Answers</u>
	19-24	<u>Philosophy & Metaphors</u>
	25	<u>Hypotheses</u>
	26-32	<u>Solution: Emergic Approach</u>
	33	<u>Lilac Chaser Illusion</u>
	34-35	<u>Lilac Chaser Model</u>
2:30	36	<u>Discussion (@Mikes?)</u>

Prologue

Setting the mental scene

Act I

“vision science is not just one branch of cognitive science, but the single most **coherent, integrated, and successful** branch of cognitive science.”

– Palmer, S. E. (1999). *Vision Science: Photons to Phenomenology*

Colour Constancy (1)

Square A
darker than
square B.

Colour Constancy (2)

A==B !

Colour Spreading

Insides of all are white

Act II

“However, the mechanism of brightness induction evident in several optical illusions, is **not yet understood even after 200 years of intense research** that saw George Berkeley, Maxwell, Helmholtz and the modern Gestalt school, that include both the intrinsic image theorists as well as the anchoring model theorists, following the “top-down” approach on one hand and Weber, Fechner, Mach, succeeded by the modern contrast theorists following the “bottom-up” approach on the other.”

— Ghosh, K., & Bhaumik, K. (2010). Complexity in Human Perception of Brightness: A Historical Review on the Evolution of the Philosophy of Visual Perception. *Journal of Biological Sciences*, 10(1), 17-35

Diagnosis

- Much neurobiological knowledge accumulated
- Much behavioural (phenomenological) knowledge accumulated
- Plethora of mental wisdom (hypotheticals) exponentially accumulates (poor S/N)
- Zero mental knowledge accumulated
 - **Not Integrated**
 - **Not Coherent**
 - **No Success**
- Challenge: find 1 fact about mental 90% accepted

Prognosis

- Normal means of science might not suffice
 - No microscope on the non-physical “mental”
 - Microscope: Four Humours → Microbiology
 - Prism/Particle Accelerator: Chemistry → Quantum Mechanics
 - Telescope: Astrology → Astronomy
 - Nil: Temperaments → Psychoanalytics → ...
 - Introspection Unreliability
 - Brain microscope (fMRI, EEG, Patch clamps)
 - Poor spatiotemporal resolution
 - Default network always active
 - Inter/Intra Subject Variation
 - **Outward Behaviour vs. Inner Explanation**
 - Emergent behaviour (also non-physical like mental)
 - Epicycles vs. Equations of Gravity/Motion
 - Glider, breeder, oscillator, spaceship, ... (shadows?) vs. Game of Life

Variation - Physics

X-ray Crystallography

- Techniques
 - [Powder Diffraction](#)
 - [Goniometer](#)
- Crystals pure
 - Perfect diffraction Pattern
 - Each part identical to another
 - Each part consistent over time
- This is a paradigm for all [empirical](#) work

Prediction Accuracy

- Precision of QED

- fine structure constant, $\alpha \rightarrow 10^{-8}$ sigs

- Psychology

- P-value significance: (every 20th theory is wrong!)

<.05, <.01

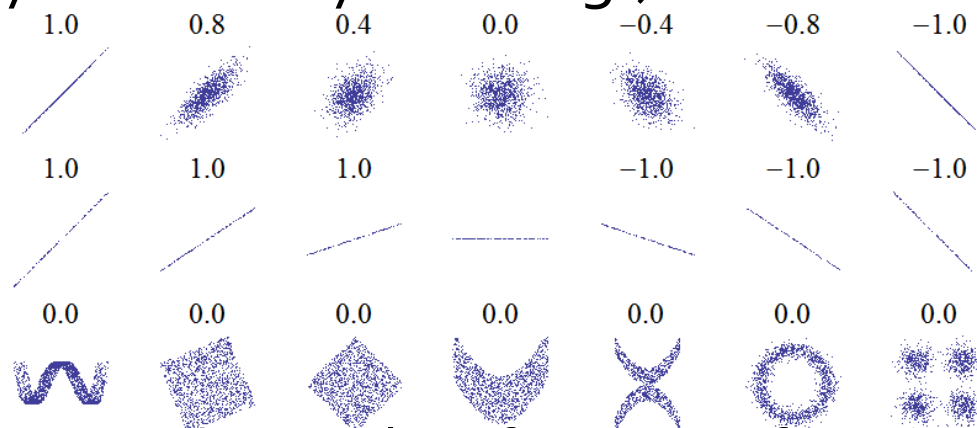

(chance of false positive)

- Pearson correlation:

- $|r^2| > 0.3 \rightarrow$ Medium

- $|r^2| > 0.5 \rightarrow$ Large

- Wikipedia: "A correlation of 0.9 may be very low if one is verifying a physical law using high-quality instruments, but may be regarded as very high in the social sciences where there may be a greater contribution from complicating factors"

Result

- Lots of overly simplistic theories that apply to a limited domain
 - “Surrogates for Theories” - Gigerenzer, G. (2009).
Surrogates for Theory. *APS Observer*, 22(2), 2-3.
- Incommensurable theories
- Cannot build up more powerful explanatory theories
 - Even among the various models of the same researcher and even when using cognitive architectures such as ACT-R

Treatment – Unify

“The first suggestion is to **construct complete processing models** rather than the partial ones we now do.”

– Newell, A. (1973). You Can't Play 20 Questions with Nature and Win: Projective Comments on the Papers of this Symposium. In W. G. Chase, *Visual Information Processing: Proceedings of the 8th Symposium on Cognition*.

- **Unfortunately, these have not been forthcoming.**
- (I convert software control flow to hardware flow)

Unity – Classical Non-Empirical

<u>Time</u>	<u>Psychology – Behaviour</u>	<u>Medicine - Symptom</u>	<u>Physics - Property</u>
	<u>Temperament (=Myers-Briggs)</u>	<u>Humour</u>	<u>Element</u>
Spring	<u>Sanguine, Artisan</u> Aspire, Inspire, Extrovert, Sensitive, Compassionate, Thoughtful, Forgetful	<u>Blood</u> Courageous, Hopeful, Amorous	<u>Air</u> Hot & Wet Power, Spirit
Summer	<u>Choleric, Idealist</u> Energy, Ambition, Assertive, Passion, Lead	<u>Yellow Bile</u> Easily Angered, Bad Tempered	<u>Fire</u> Hot & Dry
Autumn	<u>Melancholic, Guardian</u> Thoughtful, Considerate, Worried, Perfectionist, Independent, Focused	<u>Black Bile</u> Despondent, Sleepless, Irritable	<u>Earth</u> Cold & Dry Heaviness, Matter, Fertility
Winter	<u>Phlegmatic, Rational</u> Content, Kind, Accepting, Affectionate, Receptive, Shy, Stable, Relaxed	<u>Phlegm</u> Calm, Unemotional	<u>Water</u> Cold & Wet
Timeless	Divine, Unchanging, Pure		<u>Aether</u> , Space Clear, Essence

Research

Research Problems

- **P₁) What obstacles prevent the modelling of unified cognitive systems beyond a certain set of interactions?**
- **P₂) What are some viable solutions?**

Answer P1: Recursion

- Brain Modelling
 - Mostly Bottom-Up (with top-down modulation)
 - Stimulus-Response
 - Response reacted (reflex)
- Mental Modelling
 - Mostly Top-Down (with bottom-up modulation)
 - Intentional: Goal Oriented
 - Stimuli pulled (read)
- Behaviour Modelling
 - Stimulus-Response (controlled)
 - Previous behaviours affect subsequent ones
 - Cybernetic (control theory)

Recursion & Philosophy

- Current “substance” philosophy cannot handle recursion
 - “This sentence is false.” ← True or False?
 - Gödel's incompleteness theorems
 - Tarski's semantic theory of truth
 - Zeno's Paradoxes of Motion & Time
 - Recursion highlights that continuous change cannot be analytically broken up into discrete steps/values. Requires an infinity of steps and infinitesimally small values.
 - Identity and Change
 - Heap of Sand – arbitrariness of definitions; DSM
 - Ship of Theseus
 - Are you the same person today as after, losing an arm, being tortured?
- Need a Process Philosophy

Metaphors as Guides

- Metaphors guide our construction or deconstruction activities. E.g.,
 - Unstructured code → Structured → Functional → Object Oriented
- The more disciplined and explicit understanding of our ontology, the better the result
 - Lots of incompatibilities in cognition (function, computation, cause, representation); too many fallacies
- Remove bad metaphors (top-down, stimulus-response) and add better ones (interactive processes)
 - These are philosophic, metaphysical, and are about inducing theories rather than about specific theories

Metaphors & Wisdom

- *Keep it simple stupid.* (KISS Principle)
- *Nothing is ever as simple as it seems.* (Murphy's Law #2)

- *Knowledge vs. Wisdom*
 - *Analytic* - 1 possible outcome; "truth"
 - *Mystic* - 2+ possible outcomes; experience
- *Empiricism, Hardware & Software Engineering are mystic enterprises and currently not deducible*
 - *Keep our jobs!*
- *Lots of wisdom about mental, simply no knowledge of mental*

Metaphysics Frustrations

Metaphysics is a dark ocean
without shores or
lighthouse, strewn with
many a philosophic wreck.
– Immanuel Kant

Of course, what philosophers say about metaphysics, many can say about
philosophy!

Philosophy Frustrations

The point of philosophy is to start with something so simple as not to seem worth stating, and to end with something so paradoxical that no one will believe it.

- Bertrand Russell (1872 - 1970), *The Philosophy of Logical Atomism*

Metaphysics - History

- ~500 BC Process Metaphysics lost out to Substance Metaphysics
 - Due to bad timing (poor mathematical tools)
 - Buddhism took on mystic
- ~1900 AD Physics implicitly rewrote metaphysics for themselves with great success
 - Huge foundation of Substance Philosophy to overcome
- Philosophy of Cognition and Cognitive Science are still thrashing
 - Is it time to put physics explicitly back into metaphysics?

Answer P2: Hypotheses

- H1: The Emergic Approach (EA) can help induce unified theories of cognition, especially in highly recursive systems such as the brain
 - Mostly mystic philosophic advice geared toward cognitive induction – not a cognitive theory
 - First? Analytic process metaphysics
- H2: The Lilac Chaser Model (LCM) demonstrates H1
 - Proof by empiricism, not rationalism
 - All design choices here constitute our cognitive theory

Emergic Approach

Harnessing Change

Heraclitus (535-475 BC)

- Father of Process Metaphysics/Philosophy
- Aphorisms
 - “Everything is in a state of flux”
 - “The only constant is change”
 - “All things are one”
 - All things change at the same time and affect each other
 - Unity of opposites
 - Equilibrium
- **Completely mystic**

EA Summary

Emergic Metaphysics	Process philosophy adopting change interactions as a unifying metaphor
Emergic Networks	Analytic brain simulation of above as Lego™ bricks of change
Emergic Design Principles	Unify, Bottom-Up Re-Engineering, Bottom-Up/Top-Down/Lateral interactions, Model deep structure not surface phenomena via simplify globally but complexify locally, i.e., many phenomena by fewer interactions – “emergic”, cognitive plausibility
Emergic Vision System	Manage world/brain interaction where we place our Lilac Chaser Model

Process Metaphysics – Simple Process Example

- A simple **observed** process is analytic and formulated as

“A becomes of $-A/2$ ” or $A += -A/2$ or

- The change operator (“+=”)

- Usually small snippets of functional code rather than “+=”

- Example could produce the sequence $\{1, 1/2, 1/4, \dots, 1/2^n\}$ every Δt

- This could represent a battery **becoming** discharged
- Note: non-linear exponential behaviour emerges despite being simply a linear sum of parts. This is due to recursion.

- Process eventually must have self-reference (recursion)

- Allows it to change over time even if stimuli removed
- (This is explicitly not allowed in Causal Bayesian Networks)

Process Metaphysics – Simple Process Ensemble

- All processes in a system interact continuously and are shown in an ensemble. Here is the Lotka–Volterra predator-prey example

- $Rabbit \quad += (\alpha * Rabbit) \quad - (\beta * Rabbit * Fox)$
- $Fox \quad += -(\gamma * Fox) \quad + (\delta * Rabbit * Fox)$

- The $Rabbit * Fox$ term is not recursive, is not independent, has no observable reality and is simply shown for simplicity

- Represents the chance that fox and rabbits will meet

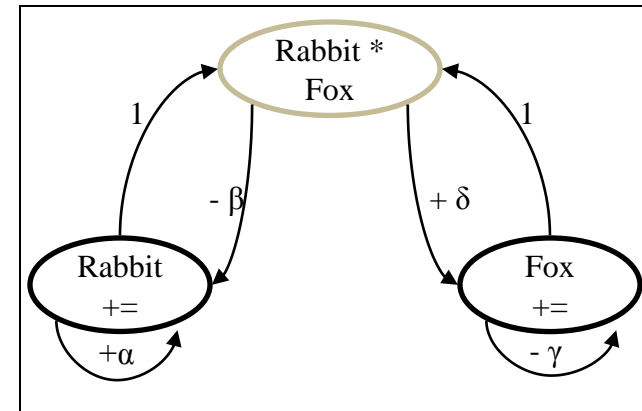

- Has no delays

- RHS influence LHS often

- Interactively

- Terms of Opposition (+ vs. -)

- System is time invariant

Interaction

- When two particles collide, they interact.

- Informationally, this can be shown as

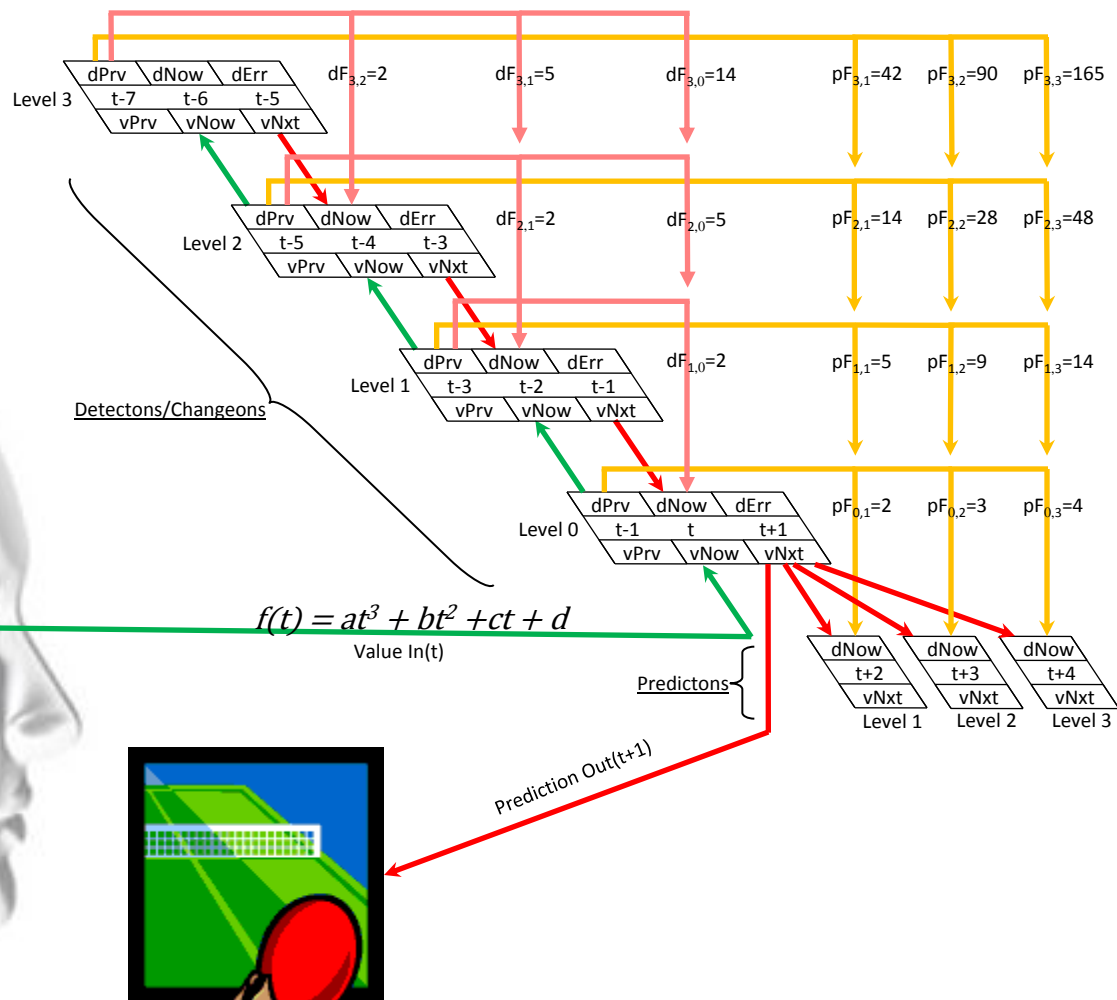

- In practice, "+=" is conceptual and replaced with short functional code segments

Process Network Example

- Automatically generates missing info
 - blink
 - Optical blind spot
- Continuous Interaction
 - Bottom-up
 - Top-down
- Incremental Learning of Dynamics
 - Not solution
 - No substance (weights)
 - Adaptive
- Incremental Levels
 - Improve accuracy
- No Delay
 - 8 Spreadsheet Columns
- Delay
 - Need Network
 - +Efferents
- Far Predictors
 - Not needed

Lilac Chaser Illusion

- Standard Explanation
 - Perception of motion due to beta movement
 - Troxler's fading
 - Negative afterimage is due to neural adaptation and colour opponent processing

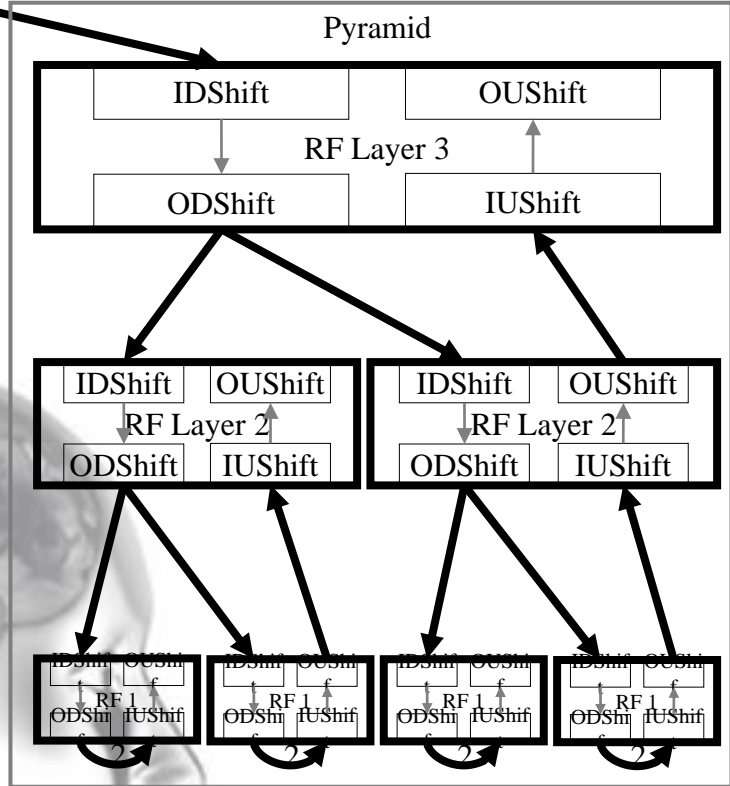

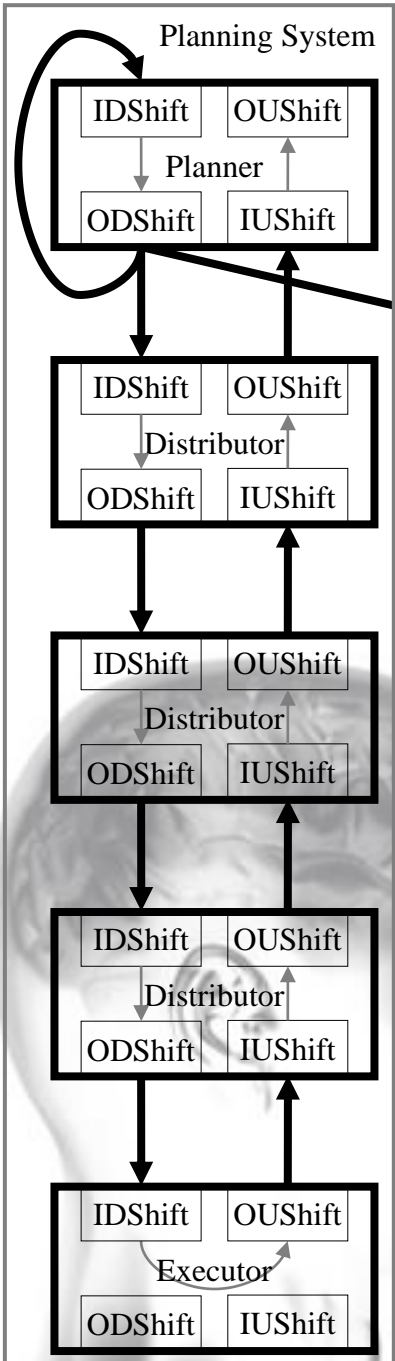

Demonstrate LCM Simulation

- Jittering on Lena's eye
- Photoreceptor Level
- Two Pathways
 - Spatial Summation
 - Change detection

Legend:
 I: Input
 O: Output
 U: Up
 D: Down

LCM Model Motor Planning

- Lateral value movement not shown

Q & A

- Mikes?
