Lilac Chaser Illusion and Virtual Eyeballs

David Leibovitz will give a live demo of his research-in-progress and discuss the nature of his research and future plans.

David will demonstrate a framework, whereby a Virtual Eye is looking at the Lilac Chaser visual illusion. Currently, the implementation has a minimal cognitive component, a set of photoreceptors for the fovea, and saccadic jitter for the eye.

Wednesday, February 3, 2010
12:00 noon to 1:00 p.m.
Room 5220 of the V-SIM Building

Everyone welcome.
